

# Community Indicators Victoria

CIV provides advisory services that specialise in helping people communicate, plan and evaluate health and wellbeing within their communities.

CIV is committed to building the capacity of others to foster equitable, healthy, engaged, empowered well planned communities and offers a free online data repository of social, environmental, democratic and cultural wellbeing.

CIV plays an important translation role, assisting decision-makers understand and use community indicators, wellbeing research and data to strengthen their advocacy and build their evidence base for policy-making.

The CIV team provides expert advice on how to use data and research knowledge for effective community planning. We have expertise in planning and review, indicator design and development, survey design and development, Geographical Information Systems (GIS) as well as the provision of suburb level demographics and customised local reports.

Since 2007, the CIV team continues to review and maintain over 80 indicators from administrative, survey and spatial data according to a broad framework of community wellbeing. This is continually updated to ensure that the most current data sets are included and accessible.

CIV is located within the McCaughey Vic Health Centre for Community Wellbeing Unit, Melbourne School of Population Health, at the University of Melbourne – a leader in the field of public health education, research and engagement. CIV is able to harness this and bring in globally recognised research and expertise that respond to clients' needs.

## How can CIV assist you?

CIV regularly provide advisory services to government and community organisations. These tailored services are uniquely crafted to respond to client needs and include:

- Project planning and evaluation workshops
- Strategic planning and review
- Survey design and development
- Indicator development and demonstration
- Suburb level demographics
- Vital signs reports
- Results Based Accountability training
